

Jess Vicman

Research Analyst

“Research with no action is an exercise in futility, action without research is an exercise in chance.”

Experience

- 3 years of full-time academic, grant-funded research using qualitative, quantitative, and behavioral data

Education

- University Of California – Berkeley, B.A., Psychology, 2018

Jess enjoys scouring through the data, looking for connections, and sharing insights that allow clients to make actionable decisions that would best serve their customers.

As far back as Jess can remember, she has always enjoyed being helpful, taking a hands-on approach whenever the opportunity arose. Jess attended UC Berkeley with plans to pursue and expand on this path through her passion in clinical psychology. However, while she was at university, Jess found an unexpected love and enthusiasm for all things statistics and data based. She found herself wanting to marry her two interests of helping others but also working closely with and analyzing data.

Her gravitation towards data analyses and research solidified as she joined multiple research laboratories. Jess would go on to pursue an Honors Research Thesis with her department and received Highest Honors in her year, bolstering her belief that research was the way to go. After graduating from university, Jess would spend a year becoming disenchanted with the current therapy standards she witnessed and had to adhere to, which would lead her to spending the next three years returning to the academic research realm, optimistically hoping to fix the problems she witnessed.

Jess began working at CCMC after seeing the slow rate at which academic research made its impact on the broader community and deciding that she wanted to work more closely with clients to help enact more immediate changes and improvements. Jess enjoys scouring through the data, looking for connections, and sharing insights that allow clients to make actionable decisions that would best serve their customers.

Jess lives in Ontario, California with her partner, Mikal, and their cat, Panda.
